

Dark Thirst – Game Rules and Help:

Chance to Win:

This game has an RTP of 94.55%

To help you understand the chance you have of winning money while playing this game we use a value called the return to player (RTP)> This means that this game will over a statistically large number of spins pay out on average 94.55 for each 100.00 staked. This is not a promise that will pay out this amount every time, some people will win more than this amount some people will win less as this game determines its payout each spin using a UK certified random number generator (RNG), so over a large enough number of spins payouts will tend towards this level of return.

Fairness

The outcome of each in this game is randomly determined in accordance with the advertised rules. The outcome of any one spin will not affect the outcome of any other spin. This game behaves fairly and has been independently tested to ensure it functions in accordance with the UK Gambling Commission regulations.

Maximum Liability

Dark Thirst has a maximum prize of 10000.00 for any given bet cycle.

The maximum prize Dark Thirst will pay out in any given bet cycle is limited. Any prize over the maximum amount that would be won will instead be reduced down to this maximum value.

The maximum prize that can be won on any one line in Dark Thirst is cash value of 10000, although it would appear that the game could pay up to 57250.00+bonus win (7500 coins for 5 Bonus symbols with 5 coin multiplier and a coin value of 0.50 and the x3 free spins bonus from win lines in free spins). This win would never be played as it would be limited by the 10000.00 max prize payout.

Guide to Betting:

This game is based on the stake of coins which, while being a bit more complicated, gives you the option to customize how much you are betting far more easily.

You have two balances visible in game:

At the top in the middle you have the balance of your account in real world money.

Next to the PAYTABLE button you also have the number of coins available which is your balance converted into Coins.

These are there to help you see how much changing the coin value affects the amount of money you have to bet with to ensuring you are not misled into betting more than you want.

The "Bet" value next to the betting options indicates how many coins you are spending when you press "Spin."

You can alter the amount you bet in three ways, the number of win lines (LINES), the number of coins bet on each with line (COINS) and the value of the coins being used (COIN VALUE). To calculate your bet value you multiply these three values together:

$LINES \times COINS = \text{Bet amount in Coins}$

$LINES \times COINS \times COIN \text{ VALUE} = \text{Bet Amount in Cash}$

To determine the amount you have won from the coin value displayed on screen you use the following formula:

$\text{Coins Win} \times \text{Coin Value} = \text{Cash Value won}$

The coins per line will have already been included in the number of coins won.

Selecting Win Lines:

You can increase or decrease the number of active win lines by opening the betting options next to the payable button and scrolling up or down the "LINES" column which is located at the far left. Selecting a number will make active all win lines from 1 up to and including the selected number, for example selecting the number 5 will make win lines 1, 2, 3, 4 and 5 active, selecting the number 25 will make all win lines active.

Paytable

The payable describes all the different prizes that are available in the game.

i

This button allows you to access the "Game Help and Rules" pages.

Sound

The speaker button will allow you to toggle off or on the sound.

Spin

This button confirms your bet and spins the reels to determine your prize, once selected this is not cancellable or refundable except in the case of malfunction.

How to Win

There are two types of win – Normal win and Scatter wins.

You win a normal win by matching symbols on selected win lines. All symbols must be matched on consecutive reels from left to right. Only the highest win on each line will be paid. Scatter wins are triggered if enough of the symbols appear anywhere in view. These also pay a win depending on how many. They do not need to be on consecutive reels from left to right in order to pay the win prize.

Wild

Wild symbols will substitute for any prize symbol except Scatter and Bonus symbols. They will always act so as to pay the highest possible prize on any given win line. Wilds also have a value if they form a line of their own from left to right they will pay out at least: 2x = 5; x3 = 200; x4 = 2000; x5=7500 unless the next symbol in the line would mean they pay higher. Note that in some exceptionally rare circumstances the payments awarded could be extremely high and may potentially be limited by the Maximum Win Limit even off a Single win line.

Scatter

To earn 10 free spins you need to get 3 or more scatter symbols anywhere in view.

All prizes won during Free Spins are tripled.

All spins won as free spins are considered part of the bet cycle of the spin that triggered them. You cannot win more free spins while already playing free spins. Free spins will start playing automatically. In addition to free spins the scatter symbols also pay the following prize: x2 = 2, x3 =4, x4=25; x5=100

Bonus Round:

The bonus Round is triggered if you get 3 or more bonus symbols on a normal win line from left to right. It will only trigger once per spin.

The bonus round will show 12 graves, you need to try and guess the graves the undead are hiding in, if you find a vampire you will earn a reward and be able to select another grave, if you dig up an innocent you won't get a reward and your grave digging bonus spree will be over.
